Authentication

The app has an account system that keeps audios and relative informations separate between users.

On the same device you can login in and log out as different users.

You can log in on different devices, and all your data will be automatically synchronized! *(all the data available through the backend)*

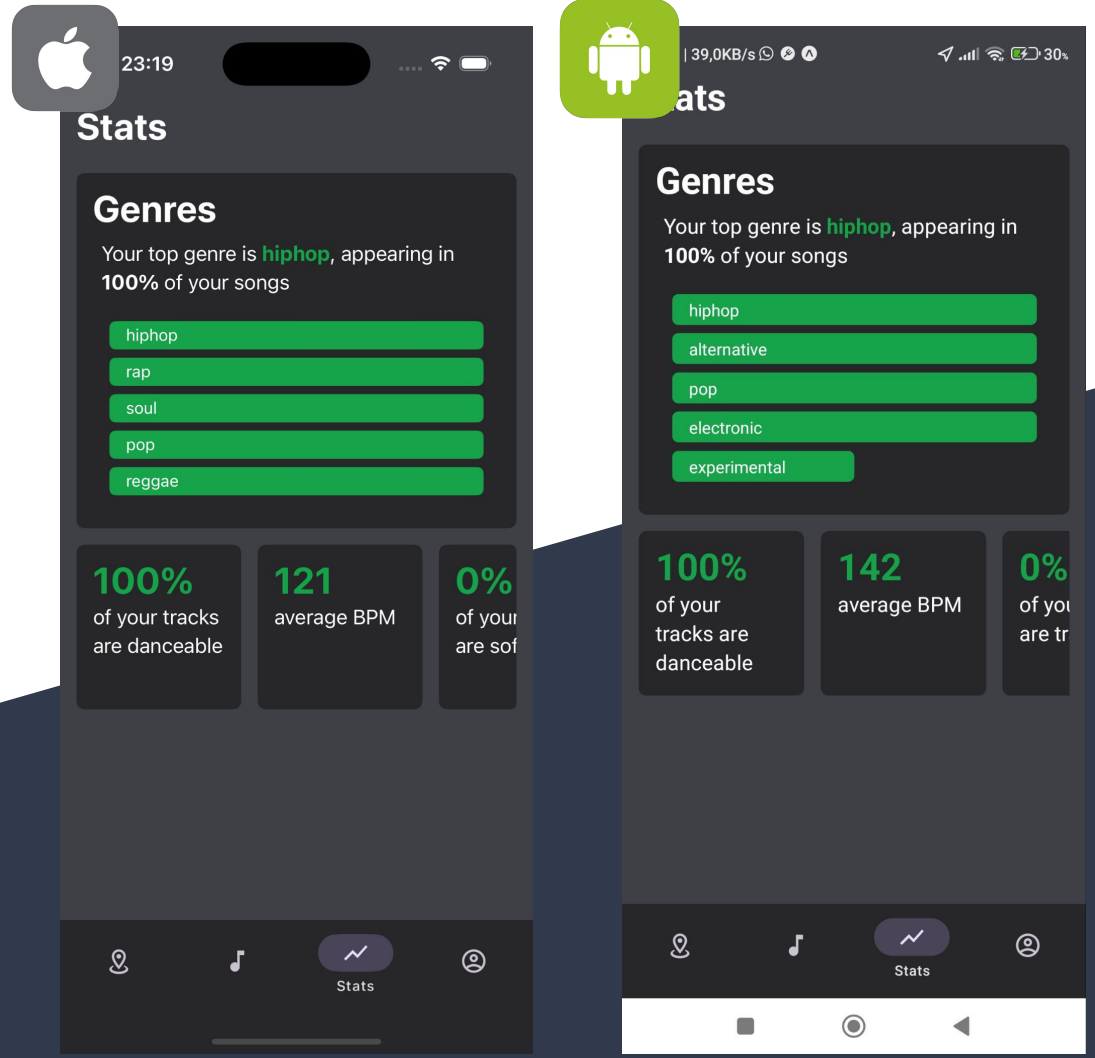
Statistics

A stats page is available

It summarises all your audios data



Song page

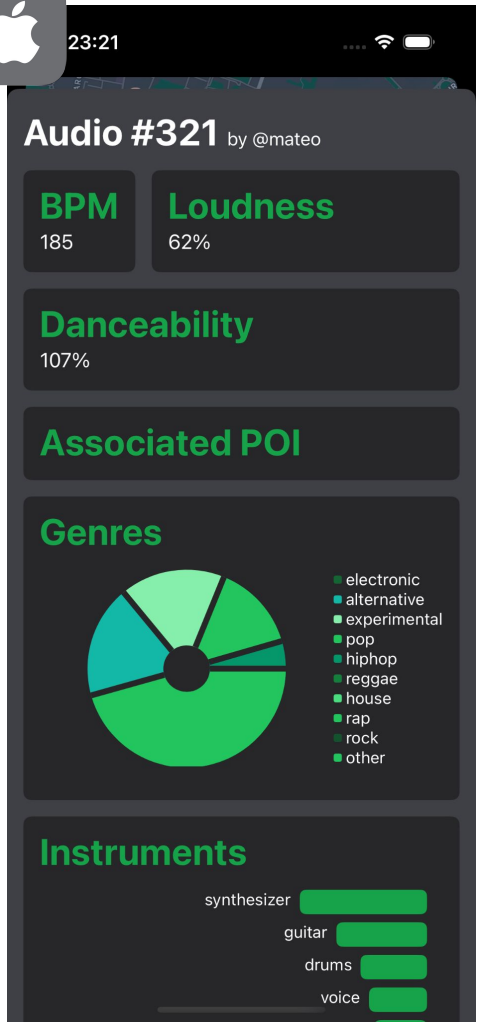
You can view information about a song you - or someone else - uploaded

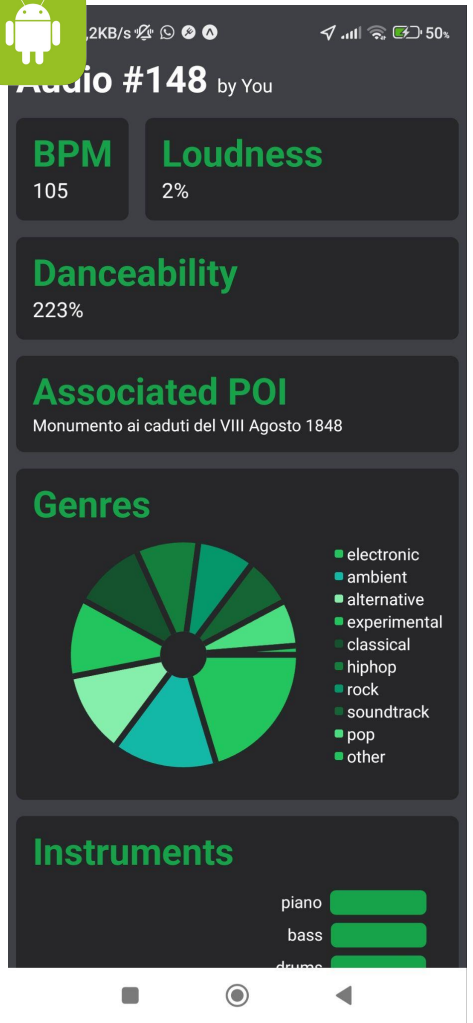
Who uploaded it,

Whether the audio is linked to a Point of Interest…

And even listen to it if the audio is on your device (and you uploaded it)

With graphs!





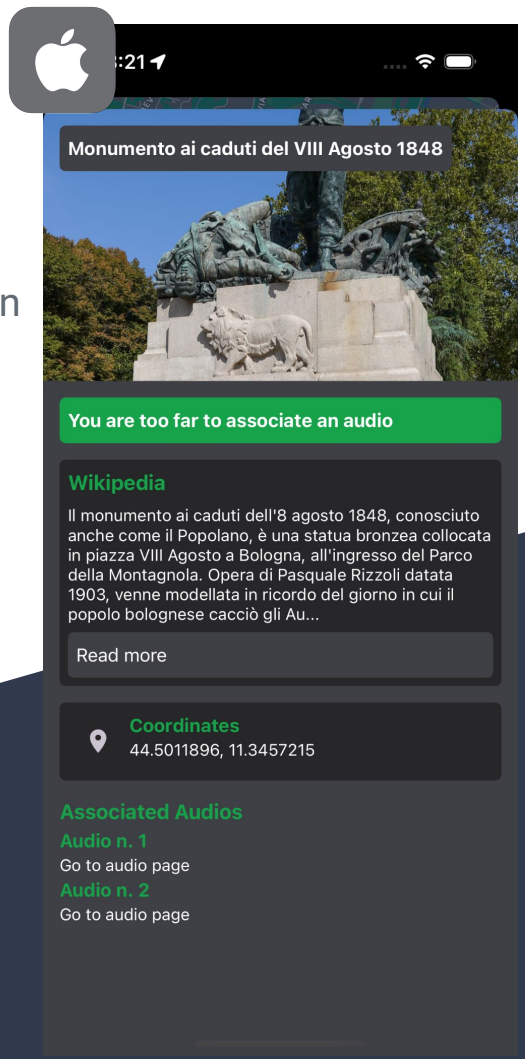
POIs

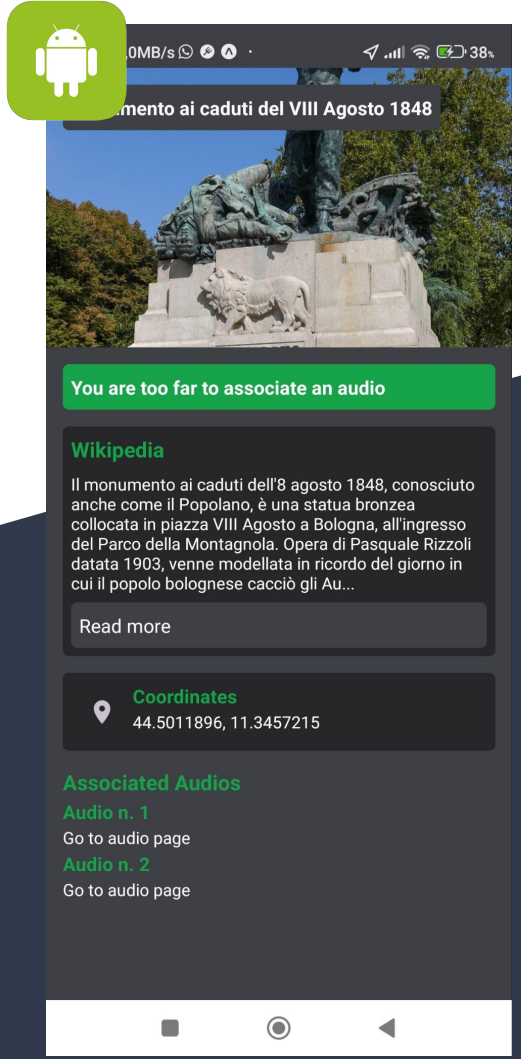
Points of Interest are locations placed on the map, fetched by Overpass Turbo (Open Street Map) API, with info and images taken from Wikidata and Wikipedia (if available)

You can associate an audio to a POI, if you're near enough

Different types:

- historical monuments
- tourist attractions
- churches
- … and more!



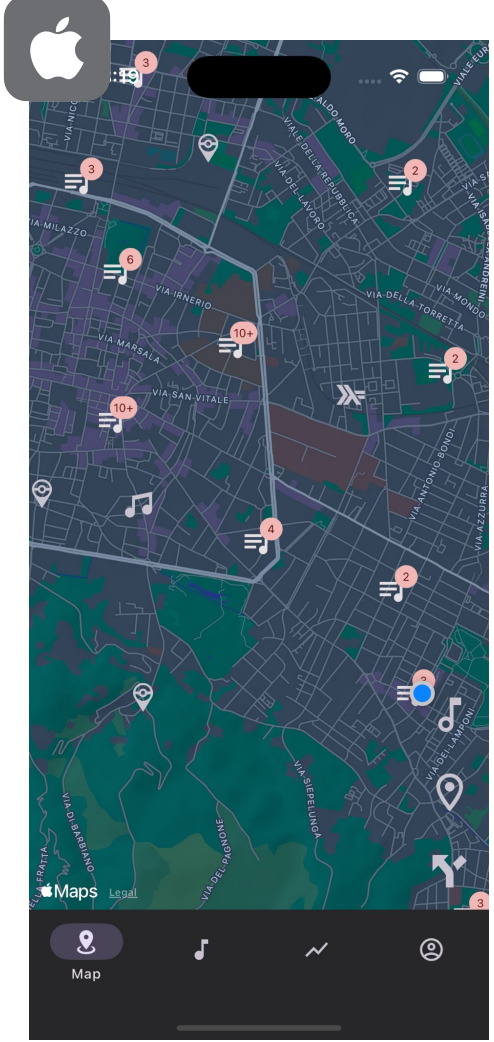


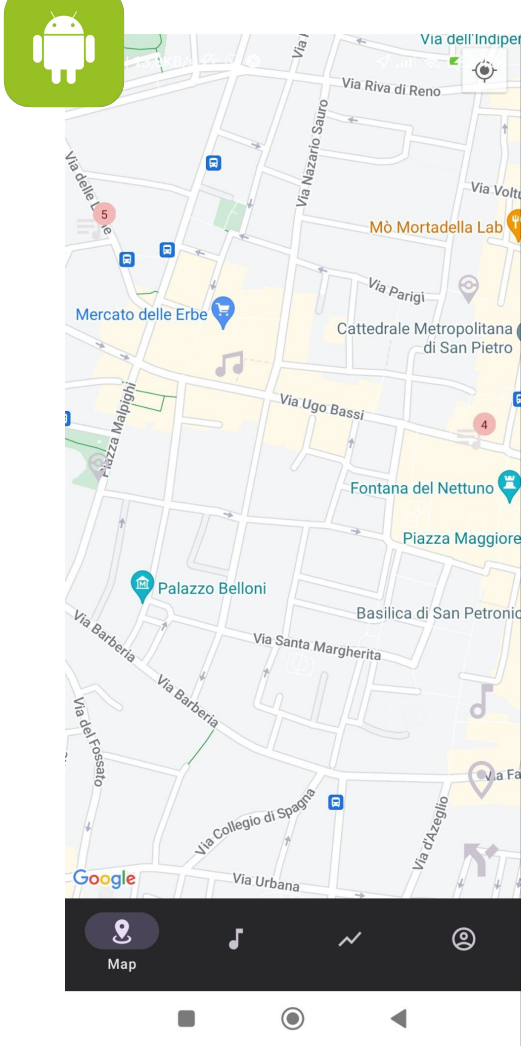
Map

Audios and POIs are visible through the map page

You can hide audios or POIs from view, or both!

Data is fetched responsibly and cautiously





Routes

Need to go from A to B? Through the map you can get the best route (thanks to Overpass API)

Easy access to the routes selector by long pressing the map

You can switch destination and start point from a button
Which becomes “use my location” when selecting travel points!

A popup appears. You can:

- see POIs near you AND the path you will traverse
- interact with them: access wikipedia page (when available) or associate an audio
- the menu recommends you the least popular POIs
- different types of POIs have different colors
